

- Eventually: expectation feels like necessity.
- So causation becomes: a mental habit formed by repetition.
- Not logically provable. • Not directly seen • But psychologically powerful.

2. Structure of the mind (Kant's move)

Kant said: Causation is not learned from experience.

- It is a built in structure of human cognition.
- The mind organizes experience into: • cause • effect • sequence • necessity
- Without that structure, experience would be chaos.
- So causation is partly: how the mind makes the world intelligible.

3. Realist view (many scientists' instinct)

Some argue: Causation exists in reality — even if we don't perceive it directly.

- Like: • gravity • fields • forces

We infer them because they explain patterns.

So the necessity we feel reflects: real structure in the world.
